

OMKAR NANDKISHOR PINJARKAR

DevOps Engineer | AWS, GCP & Azure Cloud | CI/CD | Infrastructure as Code

Pune, Maharashtra, India | +91-9284182219 | omkarpinjarkar2004@gmail.com | linkedin.com/in/omkar-pinjarkar-63665921a | github.com/omkar-pinjarkar

PROFESSIONAL SUMMARY

Motivated DevOps Engineer with hands-on project experience in CI/CD pipeline design, containerization using Docker, Kubernetes orchestration, and cloud infrastructure across AWS, GCP, and Azure. Proficient in Terraform for Infrastructure as Code, Git-based version control workflows, and Linux server administration. Experienced in monitoring and observability using Prometheus, Grafana, Datadog, and CloudWatch. Eager to contribute to high-performing DevOps teams focused on automation, scalability, and continuous delivery.

CORE TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, S3, VPC, IAM, EKS), Google Cloud Platform (GCP), Microsoft Azure

CI/CD Tools: Jenkins, GitHub Actions, GitLab CI

Containerization & Orchestration: Docker, Docker Compose, Docker Hub, Kubernetes (K8s), Helm, kubectl

Infrastructure as Code: Terraform, AWS CloudFormation

Version Control: Git, GitHub, GitLab, Bitbucket

Monitoring & Logging: Prometheus, Grafana, Datadog, AWS CloudWatch, ELK Stack (Elasticsearch, Logstash, Kibana)

Scripting & OS: Bash, Shell Scripting, Python; Linux (Ubuntu, CentOS, Amazon Linux), Windows Server

Databases & Build Tools: MySQL, PostgreSQL, MongoDB; Maven, Gradle, npm

Security & Quality: SonarQube, OWASP ZAP, Trivy, HashiCorp Vault, AWS Secrets Manager

Artifact Registry: Docker Hub, Nexus Repository, AWS ECR

Collaboration: Jira, Confluence, Slack, MS Teams

PROJECTS & PRACTICAL EXPERIENCE

Medical B2B ERP — Cloud & DevOps Deployment 2026

- Deployed a 3-service Spring Boot microservices application on **Amazon EKS** using Docker containers, Kubernetes Deployments/Services, and the AWS Load Balancer Controller with Application Load Balancer, cutting manual deployment steps by **~70%** versus traditional VM-based deployment.
- Provisioned end-to-end AWS infrastructure using modular **Terraform** (VPC, public/private subnets, NAT Gateways, IAM/OIDC, EKS cluster, managed node groups, security groups), reducing infrastructure setup time from days to **under 30 minutes** per environment.
- Built **Jenkins CI/CD pipelines** automating Maven builds, Docker image creation, Amazon ECR publishing, EKS rollout, and deployment verification, reducing backend release time by **~60%** and eliminating manual deployment errors.
- Automated **React/Vite** frontend delivery via Jenkins → Amazon S3 → CloudFront, achieving sub-second global asset delivery and **100% automated** frontend release with zero manual intervention.
- Containerized all 3 microservices with custom Dockerfiles and enforced database-per-service boundaries on **MongoDB Atlas**, improving service isolation and reducing cross-service coupling; documented full deployment evidence (Jenkins logs, kubectl/AWS CLI output) and decommissioned the AWS environment post-verification to optimize cloud cost.

EASY CRUD – 3-Tier Application Deployment 2026

- Architected and deployed a production-grade 3-tier application (React frontend, Node.js backend, MySQL database) using Docker Compose with isolated bridge networks for each tier.
- Containerized all three application layers with Docker; configured persistent volumes for the MySQL container ensuring data durability across container restarts.
- Integrated backend RESTful APIs with MySQL using environment-variable-based connection management, eliminating hardcoded credentials from all application code.
- Managed the full project lifecycle using Git and GitHub, including feature branching, pull requests, and semantic version tagging for each production release.
- Deployed and maintained the application on a Linux (Ubuntu 22.04) server, configuring system firewall rules and environment variable management for each environment.

CERTIFICATIONS & TRAINING

AWS Certified Cloud Quest Practitioner (Amazon Web Services, 2026) • Honour in Artificial Intelligence (Savitribai Phule Pune University, 2026) • Docker Essentials: A Developer Introduction (Udemy, 2026) • Jenkins: Beginner to Pro CI/CD Pipeline (Udemy, 2026)

EDUCATION

Savitribai Phule Pune University — B.E. Computer Science

Graduated: 2026 | CGPA: 7.98 / 10

LANGUAGES

English (Professional Working Proficiency) | Hindi (Native) | Marathi (Native)
